Abstract (en)
[origin: WO2018024451A1] The invention relates to a printed circuit board comprising conductor tracks (2) formed on one side of a substrate (1), wherein the substrate (1) can be connected integrally to a covering to protect the conductor tracks (2) on a contact surface (2). The substrate comprises a step (3), which forms a barrier with respect to an additive for promoting the integral connection, in order to prevent wetting of the conductor tracks with the additive. The invention further relates to a sensor comprising such a printed circuit board, for example for use in a fuel level measuring system of a vehicle.
