Abstract (en)
[origin: EP3495581A1] Mounting frame (1) designed to be arranged between floor joists in a floor structure, where the mounting frame (1) is set up to support a floor drain with an associated cassette, wherein the cassette is a rectangular disc with a mounting opening for the floor drain in a central part of the cassette, where the mounting frame (1) comprises two rails (2a, 2b) arranged in parallel adapted to be attached with their respective ends (4a, 4b) to the sides of two adjacent joists facing each other in said floor structure, and where the mounting frame (1) has two cross braces (3a, 3b) arranged between and transversally to said rails (2a, 2b) and each one of them being displaceable along the rails, wherein the distance between the parallel rails (2a, 2b) and the distance between the cross braces (3a, 3b) during mounting of these are arranged to be configured so that the outer edges of the cassette will be supported by said rails and said cross braces.
