Abstract (en)  
An arrangement (1) for self-cleaning a cooking space (2) of an oven (3) is described, wherein the oven comprises a heating mechanism (4) adapted to heat the cooking space (2) on starting of a cleaning operation, for burning a leftover (5) onto one or more walls (6) of the oven (3), and to generate a flue composition (7) comprising of at least a gas and an ash. The arrangement (1) comprising a flowrate apparatus (8) adapted to be in line of flow of the flue composition (7), and to generate a processing data (9) relating to flow of the flue composition (7), or concentration of components of the flue composition (7), or a combination thereof, and a processing unit (10) adapted to generate and send a start trigger (11) for starting the cleaning operation to the heating mechanism (4), to receive and process the processing data (9), and to generate a control trigger (12) for controlling the heating mechanism (4). The heating mechanism (4) is adapted to receive the start trigger (11) and to start the heating of the cooking space (2), and to receive the control trigger (12) and to vary intensity of heating of the cooking space (2).
