Abstract (en)

[origin: WO2018029095A1] The invention relates to a composition in the form of a solid, which composition is suitable as a dispersant for inorganic solid suspensions, comprising A) at least one water-soluble polymer, comprising polyether groups, and B) at least one water-soluble condensation product, which contains acid groups and/or salts thereof and which is based on monomers, wherein the monomers comprise at least α) a monomer having a ketone residue and β) formaldehyde. The invention further relates to a method for producing the composition according to the invention and to the use of the composition according to the invention in an inorganic binder composition.
