Abstract (en)
[origin: WO2018029038A1] The present invention relates to a process for the preparation of a polymer composition comprising at least one polymer and at least one polyether compound (PE), The polymer is obtained by radical polymerization of a monomer composition (M) comprising at least one olefinically unsaturated acid monomer and optionally further monomers such as a chain transfer agent. The radical polymerization is carried out in at least one continuously operated back-mixed reactor and in the presence of the polyether compound (PE).
