Abstract (en)

[origin: WO2018029202A1] The invention relates to an anionic surfactant of general formula (I) in which n and m are, independently of one another, numbers from 0 to 17 and  $2 < n + m < 20$ , and  $X_+$  is a charge-balancing cation. The invention also relates to a production method by means of: the acid-catalysed reaction of 2,5-bis(hydroxymethyl) tetrahydrofuran with an alkene having 5 to 22 C atoms in equimolar amounts, at an increased temperature; subsequent sulphation with a sulphating agent; and optional neutralisation by a subsequent reaction with  $X_+OH^-$  or  $X_+2CO_2^-3$ , where  $X_+$  is an alkali metal cation or a group  $N+R_1R_2R_3$ , in which R1, R2 and R3 are, independently of one another, hydrogen, an alkyl group with 1 to 6 C atoms, or a hydroxyalkyl group with 2 to 6 C atoms. Detergents or cleaning agents containing said surfactant, and the use of same to improve the performance of the detergents or cleaning agents, are also disclosed.
