Abstract (en)
[origin: WO2018028893A1] The invention relates to a stop element (20), in particular a dummy buffer for adjusting body components of, for example, passenger cars, comprising an arrangement region (22) and a stop region (24), which are mounted resiliently relative to each other, wherein the arrangement region (22) is designed for arranging the stop element (20) on a first component, and wherein the stop region (24) is designed as a stop for a second component, and wherein the stop element (20) comprises a locking mechanism (40), which is designed to lock a position/location of the stop region (24) relative to the arrangement region (22).
