Abstract (en)

[origin: WO2018031402A1] A system and method for identifying unclaimed electronic documents among at least one electronic document, each electronic document including at least partially unstructured data. The method includes: analyzing each electronic document to determine at least one transaction parameter of the electronic document; creating a template for each electronic document, wherein each template is a structured dataset including the at least one transaction parameter determined for the electronic document; and determining whether each electronic document is unclaimed, wherein determining whether an electronic document is unclaimed further comprises comparing at least a portion of the template created for the electronic document to identifying data of a plurality of previous reclaims.
