Abstract (en)
An elevator operation panel (1) is proposed which comprises a plurality of input objects (2, 2a) corresponded with floors (3, 3a) of a building, wherein by an inputting activity an input object (2, 2a) registers an elevator call. The elevator operation panel (1) has at least one blocked input object (2a) which is configurable to block an inputting activity or to reject registering an elevator call. And the elevator operation panel (1) comprises further an alarm device (4) for generating an alarm signal, when an inputting activity is acted on the blocked input object (2a).
