Abstract (en)

[origin: US2019218819A1] The invention relates to an actuating handle (100) for a door with an escutcheon (104) and a handle (102) for actuating a locking device arranged in the door. The handle (102) for actuating the locking device is mounted in the escutcheon (104) rotatably about a first axis of rotation. The actuating handle (100) moreover has a blocking device (106), having a release position in which a rotation of the handle (102) about the first axis of rotation is released, and a blocking position in which a rotation of the handle (102) about the first axis of rotation is blocked by the blocking device (106). The actuating handle (100) moreover has an actuating mechanism (112) for the blocking device (106). According to the invention, it is provided that the actuating mechanism (112) has a sliding element (108) which is displaceable along a circle segment centered around the first axis of rotation, wherein a displacement of the sliding element (108) along the circle segment brings about an actuation of the blocking device (106).
