Abstract (en)
The invention relates to an operating mechanism and in particular to a child-safe operating mechanism for a window covering, comprising a stationary carrying structure which can be fitted to the fixed surroundings, a drive axle, a contact body, a winding reel onto which at least a part of the window covering can be wound, a drive wheel wherein the drive wheel is releasably accommodated in the holding space, and at least one pressure element for forcing the contact body in the direction of an engagement wall of the carrying structure in the longitudinal direction of the drive axle.
