Abstract (en)

[origin: US2019186757A1] A guide device for guiding a goods carrier within a housing has at least two guide units which are each, at a transverse distance from one another, on the one hand fixed to the housing and on the other hand coupled to the goods carrier, and which guide the goods carrier through a traversing movement between a slid-in operating position and a pulled-out position in which it is at least partially drawn out of the housing, a synchronisation device is provided in order to synchronise the movement of the guide units during the traversing movement of the goods carrier coupled to the guide units.
