Abstract (en)
[origin: WO2018033242A1] The invention relates to a drawer rack (10) for a cabinet, in particular for a kitchen cabinet (1), having upright side walls (2) oriented parallel to each other and a rear wall which extends between said side walls and delimits a cabinet interior to the sides and rear. The drawer rack has a rack frame (6) which can be transferred from a closed position in the cabinet interior to an opening position moved out of the cabinet interior via telescopic rails (11). At least one tray (9) or similar piece of equipment can be supported on at least one vertical supporting column (8) of the drawer rack (10). According to the invention, to provide a drawer rack (10) which has a simple structure and has a pivotable frame in the open position, the rack frame (6) is hingedly connected via a pivoting lever (13) to a movable telescopic rail (11), and the rack frame (6) is hinged to the pivoting lever (13) pivotably relative to the latter. The telescopic rail (11) is assigned a slotted guide (14) along which the rack frame (6) can move when in the open position transferred into the opening position, for a pivoting movement of the rack frame (6) relative to the telescopic rail (11).
