Abstract (en)

[origin: WO2018033280A1] The invention relates to a method for signaling a driverless operating state of a motor vehicle, in which the motor vehicle can be driven in a driverless manner, wherein, so long as the motor vehicle is operated in the driverless operating state, the ground of the environment of the motor vehicle is illuminated with an illuminating light by means of an underbody illuminating device such that it can be signaled to the environment that the motor vehicle is being operated in the driverless operating state. The invention further relates to a corresponding device and to a corresponding motor vehicle.
