Abstract (en)
[origin: WO2018036587A1] The invention relates to a connection element (1), which comprises a contact element (2) and an actuating element (3) and serves for mechanically and electrically contacting a conductor. The contact element (2) has at least one contact arm (4), which is designed for spring-loaded clamping of a conductor on a contact surface (7). The connection element (1) can be transferred into different open or closed states by means of a driver (5) on the contact arm (4) and by means of a guide contour (6) in the actuating element (3).
