Abstract (en)  
A spinning top game device (1) is provided, which comprises a shaped sheet (2) comprising an outer edge (2a) defining a centre of gravity (2b), a first central cutting line (3) defining a tip member (3a) and two first ends (3b), which define the outermost points of the central cutting line (3), the first ends (3b) lying along the same central straight line (4a), substantially passing through the centre of gravity (2b) of the shaped sheet (2), two folding lines (4) consisting of two segments lying along the central straight line (4a), the folding lines (4) extending between the first ends (3b) and two second ends (4b), a second central cutting line (5) defining, on the opposite side of the first central cutting line (3) with respect to the central straight line (4a), an uninterrupted path with ends coinciding with the second ends (4b), the first and second central cutting lines (3, 5) being adapted to be folded along the folding lines (4) so as to be perpendicular with respect to the remaining part of the shaped sheet (2) and defining a tip and a handle, respectively, for the spinning top gaming device.
