Abstract (en)
[origin: WO2019121997A1] The invention relates to a compressor for compressing coolant circulating in a cooling circuit, where, in an operating state of the compressor, in which only the weight force of a compressor-motor unit (4) acts on a spring element arranged in a receiving element (15,16,17,18), at least three, preferably at least 50%, particularly preferably more than 70%, of the spring coils of each spring element (10,11,12,13), as observed in the vertical direction (23), are located inside a receiving space (32) of the respective receiving element (15,16,17,18).

Abstract (de)
Kompressor zum Verdichten von in einem Kühlkreislauf zirkulierendem Kältemittel, bei dem in einem Betriebszustand des Kompressors, in welchem nur die Gewichtskraft einer Verdichter-Motor-Einheit (4) auf ein in einer Aufnahme (15,16,17,18) angeordnetes Federelement (10,11,12,13) wirkt, zumindest drei, vorzugsweise zumindest 50%, besonders bevorzugt mehr als 70%, der Federwindungen des jeweiligen Federelementes (10,11,12,13) in eine Höhenrichtung (23) gesehen innerhalb eines Aufnahmevolumens (32) der jeweiligen Aufnahme (15,16,17,18) liegen.
