Abstract (en)
This invention is related to a lighting device (1) comprising a housing (2), a light source (3), an internal support (4), an external heatsink (5) and a thermally conductive link (6). The internal support (4) is located inside the housing and in thermal connection with the light source (3). The external heatsink (5) is located at least partially outside the housing (2). The thermally conductive link (6) is in thermal contact with the internal support (4) and with the external heatsink (5). The thermally conductive link (6) is flexible and has a thermal conductivity greater than 100 W/m·K.
