Abstract (en)

[origin: CN109950003A] The invention relates to a winding device for fully automated wrapping of a wire bundle with an adhesive tape comprising a winding unit with an outer ring open on one side, on which an annular winding rotor open on one side is relatively rotatably disposed about the outer ring about a rotation axis extending in the longitudinal direction of the winding device, wherein a holder for receiving a roll of adhesive tape is rotatably mounted on the winding rotor; a tensioning device for tensioning the wire bundle in the longitudinal direction of the winding device; an adjusting unit, by means of which the winding unit transversely to the longitudinal direction of the winding device between a working position in which the winding unit surrounds the tensioned wire bundle and a recessed position, in which the tensioned wire bundle is arranged outside the winding unit, a feed unit, by means of which the winding unit in the longitudinal direction of the winding device is movable; and a control device. The invention further relates to a method for the fully automated wrapping of a wire bundle with an adhesive tape.
