Abstract (en)

[origin: WO2018065419A1] The invention relates to a rail vehicle coupling (1) for connecting two rail vehicles (2, 3), comprising a joint eye (4) configured for detachably connecting to one of the two rail vehicles (2, 3), and a joint fork (5) configured for detachably connecting to the other of the two rail vehicles (2, 3), as well as a horizontally aligned axle (6) which is connected to said joint fork (5) and which penetrates a spherical bearing (7) connected to said joint eye (4), wherein the joint fork comprises a securing device for detachably securing a servicing frame (8), and the joint eye comprises at least one adapting receiving portion (9) for laterally aligning said servicing frame (8).
