Abstract (en)

[origin: WO2018036692A1] A container handling plant (1; 2) and a method for a container handling plant (1; 2) are shown. The container handling plant (1; 2) comprises at least one container handling machine (10, 20, 30, 40) for handling containers (5), wherein at least one container handling machine (10, 30, 40) has a type preselection memory (11, 31, 41) in which it is possible to preselect different types (111, 112; 311, 312, 313; 411, 412) for handling to be carried out by the container handling machine (10, 30, 40), at least one output device (15, 35, 45, 16, 36, 46) which is arranged on the at least one container handling machine (10, 30, 40) and is intended to output an audio signal (TS1, TS2, TS3) and/or an optical signal (OS1, OS2, OS3), and a control device (60) which is configured to control the at least one output device (15, 35, 45, 16, 36, 46) in such a manner that the output device acoustically outputs a predetermined audio signal (TS1, TS2, TS3) comprising tone sequences with at least two different tones and/or optically outputs an optical signal (OS1, OS2, OS3) if, on account of the type (111, 112; 311, 312, 313; 411, 412) preselected in the type preselection memory (11, 31, 41), a change of a type (111, 112; 311, 312, 313; 411, 412) or refilling for the preselected type (111, 112; 311, 312, 313; 411, 412) is imminent in the future on the container handling machine (10, 20, 30, 40) after expiry of a predetermined period.
