Abstract (en)  
[origin: WO2018037184A1] The invention concerns an attachment profile member (6a, 6b) for attaching a fabric for producing a stretched ceiling in a room to be treated, the attachment profile member comprising at least two wings (61, 63) interconnected by a connecting wall (62), said wings being arranged with respect to each other such that they define a slot (22), said profile member being characterised in that it comprises at least one passage opening (19) arranged with the slot to allow air to pass through said profile member. The invention also concerns a ceiling assembly that allows air to flow inside a room to be treated, comprising a stretched fabric extending between the walls of the room to be treated (1) and attached to said walls by means of attachment profile members, at least one of the attachment profile members being an attachment profile member (6a, 6b) that allows air to pass between the plenum chamber and the room to be treated.
