Abstract (en)  
The invention consists of a tray made from the development of a rectangular sheet with folding and cutting lines to determine a base (3), two side sections (4), and two end sections (8) or end walls, with the particular feature that the end walls are extended by lateral expansions (9) which remain concealed inside a prolongation wall or extension (5) of the side sections (4), the assembly being complemented by an enclosure (2) that is placed below and against the base and encloses the two end walls of the tray, both on the inner face and the outer face thereof, essentially reinforcing the structure of the tray and establishing a lower raised surface with respect to the support surface as a result of the fact that said reinforcing enclosure has protruding elements of the same material attached to the outer surface thereof in the form of feet (15) that facilitate the positioning and stacking of the trays.
