Abstract (en)  
[origin: EP3505704A1] An external counter-wall structure for thermal-acoustic insulation of buildings, comprises a multilayer coating () adapted to cover the external wall () of a building to increase its thermal and/or acoustic insulation features, anchoring means () of the multilayer coating () to the external wall (), spacer means () adapted to be placed between the multilayer coating () and the external wall () to maintain the first spaced apart from the latter and define a first interspace (), a supporting frame () for an outer covering () placed on the opposite side of the multilayer coating () with respect to the spacer means (). The anchoring means () comprise a plurality of fastening elements each of which has a plug () adapted to be fixed in the outer wall () of the building and a pin () that can be inserted in the plug () to protrude from the external wall (), the pin () being adapted to make a corresponding hole in the multilayer coating () upon application by pressure of this latter on the fastening elements.
