Abstract (en)

The present technology relates to an information processing device and an information processing method that enable a desired voice recognition result to be easily obtained. The information processing device includes a presentation control unit that controls a separation at a time of presenting a recognition result of voice recognition on the basis of context relating to voice recognition. The present technology can be applied, for example, to an information processing device that independently performs voice recognition, a server that performs voice recognition in response to a call from a client and transmits the recognition result to the client, or the client that requests voice recognition to the server, receives the recognition result from the server, and presents the recognition result.
