Abstract (en)

Embodiments of this application provide a wireless communication method, a terminal device, and an access network device. The method includes: obtaining, by a first terminal device, a performance parameter value that exists when the first terminal device communicates with at least one second terminal device by using a radio link, where the first terminal device communicates with an access network device by using a wireless mobile network, and the at least one second terminal device communicates with the first terminal device by using a wireless fidelity technology; and reporting, by the first terminal device, the performance parameter value to the access network device, so that the access network device learns of transmission performance of the radio link. According to the embodiments of this application, the access network device can learn of performance of the radio link.
