Abstract (en)
[origin: WO2018052731A1] A system for securing shoes to the feet using a one or two pull shoe closure arrangement. Each embodiment of the system uses a squared-cord arrangement that extends between the lateral and medial sides of the shoe. The various embodiments arrange either one or two draw straps connected to one or more squared-cord portions to draw in and tighten the sides of the squared-cord arrangement. A single pull strap in a first embodiment is redirected from a lateral orientation to a longitudinal orientation where it is drawn back and secured on the heel portion of the shoe. Alternate embodiments pull two parallel shorter draw straps laterally to points of securement on the sides of the shoe. Further alternate embodiments pull a draw strap longitudinally along a midline at the top of the shoe to a point of securement back onto the squared-cord arrangement.
