Abstract (en)
[origin: WO2018041673A1] The invention relates to a support device (6, 19) for a reversing reel (4, 17) for reeling a metal strip (2), comprising at least one support unit (7, 20), which can be brought into supporting contact with a free end section of a reel mandrel (5, 18) of the reversing reel (4, 17), which reel mandrel is used for reeling. In order to enable improved continuous support of the free end section during a complete reeling operation, the support device (6, 19) comprises at least one guiding unit (8, 21), on which the support unit (7, 20) is slidably guided and which supports the support unit (7, 20) in every position of the support unit (7, 20) relative to the guiding unit (8, 21).
