Abstract (en)

[origin: WO2018041954A1] The invention relates to a device (104) for sealing at least one door leaf (106) for a rail vehicle (100), said device (104) having at least one sliding element (112) which is designed to move the door leaf (106) in a z direction of the rail vehicle (100) when it is close to a closed position in order to force a sealing element of the door leaf (106) against a sealing counter-element of a portal (107) of the rail vehicle (100).
