Abstract (en)
[origin: WO2018041427A1] The invention relates to a labeling device (10) for containers (12), comprising a receiving cylinder (14) having a plurality of recesses (16), which are designed to hold a receiving sponge (18) having a receiving surface (20) for a label (22), said receiving sponge being designed to press the label (22) upon transfer of a label (22) to the container (12). Each receiving sponge (18) according to the invention has at least one recess (30, 32) extending parallel to the receiving surface, such as a bore, for example, which can be penetrated by at least one retaining element (40, 42) held on the receiving cylinder (14).
