Abstract (en)
[origin: WO2017097388A1] A cigarette pack configured in the form of a sealed pack consists of an inner pack configured in the form of a sheet-material block (11) and of an outer pack (25) configured in the form of a hinge-lid box. An opening aid (18) of the sheet-material block (11) is provided with a removal opening (19) which is formed in the manner of an open aperture, by punching, during production of a blank for the sheet-material block (11), in particular in the region of a continuous sheet-material web. Said removal opening (19), which is free from the outset, is closed by a closure flap (20) which, on account of appropriate glue connection, can be opened and closed repeatedly. The closure flap (20) is preferably connected on a permanent basis, via an actuating flap (24), to the inner side of a lid front wall (31) of the outer pack (25).
