Abstract (en)

[Problem] To provide a surface-treated steel sheet, etc. for which it is possible to restrain generation of sulfidation blackening while taking the influences of stannous oxide and stannic oxide into consideration.[Solution] The surface-treated steel sheet of the present invention includes a steel sheet, a tin plating layer formed on the steel sheet, and a chemical conversion film that is formed on the tin plating layer and contains essentially no chromium. The surface-treated steel sheet is characterized in that in measurements using anode polarization, the current density ratio of a current density I₁ at a potential representing a reaction of stannous oxide (SnO) after undergoing a heat treatment equivalent to coating and baking to the sum (I₁ + I₂), where I₂ is a current density at a potential representing a reaction of stannic oxide (SnO₂), is less than 0.36.
