Abstract (en)

The invention relates to a connecting element for providing a connection between a sill and a jamb of a frame, which connecting element comprises a first part with first material properties and a second part with second material properties, which second material properties differ from the first material properties, and wherein the second part is connected inseparably to the first part. The invention also relates to a frame with at least one such connecting element. The invention further relates to a method for manufacturing such a connecting element.
