Abstract (en)
[origin: ES2719152A1] Procedure for a cooking field. The present invention relates to a process for a cooking field (10a-c), in particular, for the manufacture and/or for the start-up of the cooking field (10a-c), which has at least one interface user (12a-c) and which prevents the exceeding of a limit value of the heating power in at least one operating state in which, for heating a cooking battery (14a-c) with at least one Existing heating type, only a heating power of a maximum of the limit value of the heating power is available which is lower than the heating power selectable for the type of heating existing in at least one other operating state. In order to provide a generic device with better properties in terms of its flexibility, it is proposed that exceeding the limit value of the heating power is prevented by adapting the user interface (12a-c) depending on the type of existing heating.
