Abstract (en)
[origin: WO2018082862A1] The invention relates, inter alia, to a mobile radio device (10) for a vehicle, in particular a rail vehicle (800), having at least a first and a second transceiver (100, 200) each having a transmitting module (SM) and a receiving module (EM). The invention provides for the mobile radio device (10) to have one or more transmitting antennas (120, 220, 320) for transmission and to have one or more receiving antennas for reception, wherein the receiving antenna(s) connected to the receiving modules (EM) of the first and second transceivers (100, 200) are separated from the transmitting modules (SM) of the first and second transceivers (100, 200), and wherein the transmitting antenna(s) (120, 220) connected to the transmitting modules (SM) of the first and second transceivers (100, 200) are separated from the receiving modules (EM) of the first and second transceivers (100, 200).
