Abstract (en)
[origin: WO2018046360A1] The invention relates to a fastening device (1) for fastening objects together or to a part of the human body, said device having an elongate body comprising two ends (5, 7), at least one clasp (11) being cut into at least one of the ends (5, 7) by a notch passing through the body thereof, said one or more clasps (11) each comprising a head (15) with a top and a bottom (17), at least one end (5, 7) having at least one opening (13) intended for receiving said or at least one of said clasps (11) of the other end (5, 7) with a view to closing the fastening device (1); the device being characterised in that the bottom (17) of said one or more clasps (11) has, at the point where it links with the head (15), a catch (19, 21) intended for catching the edge of the opening (13) or of one of the openings (13) when said head (15) is inserted into said opening (13); and in that at least one ending of at least one notch forming a clasp (11) has a perforation (31, 33), so as to form at least one of the edges of the bottom (17) and the one or more associated catches (19, 21).
