Abstract (en)  
[origin: WO2018046213A1] The invention relates to an operating device (10), in particular a remote control, comprising a spray water-tight housing (12) and at least one control device (18) which has an input device (22) with a push-button head (58) that can be displaced manually along a longitudinal axis (64), a rotary member (76) that is rotatable about an axis of rotation and a coupling mechanism, by means of which a linear movement of the push-button head (58) can be translated into a rotary movement of the rotary member (76), wherein a signal transmitter is held in a rotationally fixed manner on the rotary member (76), which cooperates with a sensor element arranged in the housing (12). In order to further develop the operating device (10) in such a manner that the input device (22) can be mounted in a simple manner and, if required, can easily be exchanged, the input device (22) can be inserted in a mounting direction (24) into an outer side recess (26) of the housing (12) and, if required, can be removed from the recess (26).
