Abstract (en)

[origin: WO2018046203A1] The invention relates to a method for receiving, processing and transmitting data, comprising a step of receiving first data values which comprise first surroundings data values and first information on a first surroundings sensor system (101) of a first vehicle (100), wherein the first surroundings data values represent a surroundings (150) of the first vehicle (100) and are detected by means of the first surroundings sensor system (101), a step of receiving second data values which comprise second surroundings data values and second information on a second surroundings sensor system (201) of a second vehicle (200), wherein the second surroundings data values represent an surroundings (250) of the second vehicle (200) and are detected by means of the second surroundings sensor system (201), a step of evaluating the quality of the first and the second surroundings sensor system (101, 201) as a function of the first and second data values, and a step of transmitting a signal for influencing the first and/or the second surroundings sensor system (101, 201) as a function of the evaluation of the quality of the first and the second surroundings sensor system (101, 201).
