Abstract (en)

[origin: CN110047454A] A musical instrument stand (1), in particular a multiple guitar stand, comprises a base frame (10) and at least one pair of support members that can be mounted on the base frame (10). The support members each have a support surface for the main body of the musical instrument. The base frame has: a support frame (11) having two support beams (12a, 12b) extending parallel to each other, each of the support beams having a non-rotationally symmetrical cross-sectional shape (Q1); the leaning frame (14) is connected with the supporting frame (11); the rest stand (14) has a positioning beam (15) extending parallel to the support beams (12a, 12b) and at least one support arm (16, 17) connecting the positioning beam (15) to the support frame (11), respectively. The positioning beam (15) defines at least one positioning surface (31) for the neck of the musical instrument directly or by means of a positioning element (30) that can be fastened to the positioning beam (15). The support members each have a fastening recess (24) adapted to the cross-sectional shape (Q1) of the support beam.
