Abstract (en)
[origin: EP3512045A1] The invention relates to an electrical outlet, which comprises a side wall (2.1) demarcating a cavity; a bottom (2.2) at a first longitudinal end of the cavity; a cover (5) comprising at least two orifices (5.1), with the cover being (5) arranged so it is movable with respect to the bottom (2.2); and return means (7) for returning the cover (5) to a second longitudinal end of the cavity opposite the first longitudinal end. The electrical outlet additionally comprises retaining means (13, 14) that can be actuated to retain the cover (5), the cover (5) being moved with respect to the second longitudinal end, such that the return of the cover (5) by the action of the return means (7) is prevented.
