Abstract (en)  
A method and an apparatus for determining switching delay times of power semiconductor switch components in parallel connected half bridge legs in which two or more power semiconductor switches are controlled in parallel. The method comprises providing a gate control signal to gate drivers of the parallel connected power semiconductor switch components, determining collector to emitter voltages of the parallel connected power semiconductor switch components, and determining separate delay times for each of the parallel connected power semiconductor switch components based on the time instant of the gate control signal and the determined collector to emitter voltages or time derivatives of the determined collector to emitter voltages.
