Abstract (en)  
[origin: WO2018091216A1] The invention relates to a method for the additive production of a component (10, 10a, 10b, 10c), comprising the detecting of a component geometry of a first region of the component to be additively produced, the transferring of structural geometry (7, 7a, 7b, 7c) derived from the detected component geometry to a processing region (4) of a construction platform (1), the mechanical processing of the construction platform (1) in the processing region (4) such that the structural geometry (7) is transferred to the structure of the construction platform (1), such that a structural surface (AF) for the component (10) is defined by the structural geometry (7), and the additive structuring of the component (10) on the structural surface (AF). The invention further relates to a computer-readable medium.
