Abstract (en)

[origin: WO2018050813A1] The invention relates to a method for determining a wheel load (WL) acting on a wheel (W) of a vehicle (1), wherein the wheel (W) comprises a rim and a tire mounted onto the rim, and a sensor unit (12) mounted at the wheel (W), wherein the method comprises: (a) determining a tire pressure (p) of the tire by means of the sensor unit (12), (b) determining a tire footprint of the tire by means of the sensor unit (12), when the vehicle (1) is driving, (c) determining the wheel load (WL) based on a predetermined relationship between the wheel load (WL), the tire pressure (p) and the tire footprint,(d) analysing temporal variations of the tire pressure (p) during a standstill period of the vehicle (1) for determinin gone or more parameters indicating the temporal variations of the tire pressure (p), and (e) estimating a change (dWL) of the wheel load (WL) during the standstill period based on the one or more determined parameters. The invention further relates to a device for determining a wheel load (WL), and a method and a device for determining a weight of a vehicle (1).
