Abstract (en)
[origin: US2018105272A1] A multiple seat set for use in a transport vehicle such as an aircraft is disclosed. The seat set increases seating room and comfort for passengers without increasing the footprint of the seat set. The seat set includes a staggered seating arrangement where seating surfaces of adjacent seats are disposed in alternating heights (e.g., vertical heights) while the seating surfaces and seat backs of such adjacent seats are disposed in alternating forward and back positions. The staggering of the seat surfaces and seat backs results in misalignment of shoulders and hips of passengers in adjacent seats.
