Abstract (en)

[origin: WO2018050577A1] The invention relates to braking device (5) for an elevator system (1). The elevator system (1) comprises a cab (2), which can be moved within an elevator shaft (3). The braking device (5) has an actuator (7) and a brake (6). The actuator (7) is designed to provide an actuation force (B) for the brake (6) as needed. The braking device (5) has a force-measuring assembly (18) for producing a load state value (p20) of the cab (2). The force-measuring assembly (18) is mechanically coupled to the actuator (7) in such a way that the actuation force (B) depends on the load state value (p20).
