Abstract (en)
[origin: WO2018050284A1] The invention relates to a sanitary outlet unit (1), wherein, on a valve element (4), which can be adjusted between an open position and a closed position in a flow path (2), a contact surface (6) is formed, which covers a corresponding, stationary counter surface (7) in the open position and uncovers said counter surface in the closed position, such that the valve element (4) is automatically held in the open position by the pressure in the flow path and returns to the closed position in the event of a pressure drop.
