Abstract (en)
[origin: WO2018050648A1] The invention relates to a system (10) for energy and/or data transmission in a vehicle (15), comprising at least one node element (120) for the cross-linked connection of at least two electrical components (30) of the vehicle (15), such that different connecting paths are provided and that the transmission of energy and/or data is carried out in an adapted manner via at least one of the connecting paths.
