Abstract (en)

[origin: EP3514691A1] Provided are a data communication device and system, the system comprising: a master communication device and a slave communication device, wherein the master communication device comprises: a power supply interface connecting to a direct current power supply source; a first wired communication interface composed of a first communication sub interface and a second communication sub interface, wherein the first communication sub interface is electrically coupled to the power supply interface, and the second communication sub interface is electrically coupled to a ground end of the master communication device; a first energy storage device, a first end thereof being electrically coupled to a connection point between the first communication sub interface and the power supply interface; and a control port of a first main control chip being electrically coupled to a second end of the first energy storage device; and the slave communication device comprises: a second wired communication interface composed of a first communication sub interface of the slave communication device and a second communication sub interface of the slave communication device; a second signal collection circuit, an input end thereof being electrically coupled to the first communication sub interface of the slave communication device; and a detection port of a second main control chip being electrically coupled to an output end of the second signal collection circuit.
