Abstract (en)
[origin: WO2018055271A1] The invention relates to a hairstyling appliance (2) comprising a barrel (6) mounted such that it can rotate about its longitudinal axis, and a winding element (11) designed to wind a strand of hair around the barrel (6), the winding element (11) rotating as one with the barrel (6) and having a proximal end mounted such that it can pivot relative to the barrel (6) between a spaced-apart position and a near position. The hairstyling appliance also comprises a movable protective cover (14) mounted such that it can move between: a closed position, in which the movable protective cover (14) at least partially conceals the barrel (6) and the winding element (11) so as to restrict access to the barrel (6) and to the winding element (11); and an open position, in which the movable protective cover (14) provides at least partial access to the barrel (6) to allow a strand of hair to be inserted between the barrel (6) and the winding element (11). Hairstyling appliances.
