Abstract (en)  
[origin: WO2018055272A1] The invention relates to a hairstyling appliance (2) comprising a barrel (6) mounted such that it can rotate about its longitudinal axis; a winding element (11) designed to wind a strand of hair around the barrel (6), the winding element (11) rotating as one with the barrel (6) and having a proximal end mounted such that it can pivot relative to the barrel (6) between a spaced-apart position and a near position; and a movable guiding element (27) designed to occupy a standby position and an operating position, said movable guiding element (27) being configured to be moved from the standby position into the operating position when the winding element (11) is moved from the spaced-apart position into the near position and also being configured to move a strand of hair placed across the barrel (6) such as to position the strand in a given orientation (Op) relative to the barrel (6) when the movable guiding element (27) is moved from the standby position into the operating position. Hairstyling appliances.
